March 18, 1964

Dear Sir,

Two people in our class saw an unidentified flying object. Five other people in our community saw it also. It was seen Monday, March 16, 1964. Tuesday March 17 1964 our class heard something and a boy in our class said it sounded like the object he saw. We have a book that shows and tells about flying saucers. One of the saucers in the book is exactly the same as the one they saw. It makes two noise that we know of. One is a very buzzing sound and the other sound was short and continuous. It wasn't a plane, helicopter, jet or satellite and flies at a low altitude. It wasn't flying at a high speed and the object seems to stay in one area. It has white red, green and orange lights that stay on all the time. The night one person saw it four other people heard it.

The Yale Observatory spotted an unidentified flying object. We enclose a copy of the object. Please send us more information on this subject. Thank you.

Chief of Staff of the United States Air Force,

Washington D.C. SHAFI

WPA

We would like to recommend that your class read "The World of Flying Saucers" by Menzel and Boyd, published by Doubleday. Dr. Donald H. Menzel is an astronomer and astrophysicist, and is the Director of the Harvard College Observatory. Dr. Menzel gives many scientific explanations of how a particular phenomenon accounts for each category of UFO appearance. We think this book will be of interest to all of you.

Inclosed are several copies of the new Air Force Fact Sheet on the subject of Unidentified Flying Objects. These too will help to explain this fascinating subject to you.

Sincerely,

MASTON M. JACKS
Major, USAF

March 24, 1964

Dear Children:

Thank you for your letter of March 18, 1964, in which you reported seeing an Unidentified Flying Object and inclosed a very fine drawing of one like that which you observed.

Mr. George Adamski's books are classed as science-fiction. This means that his writings are similar to other adventure stories you may have read in school such as Jules Verne's "Twenty Thousand Leagues Under the Sea", or "The Wizard of Oz" by Frank L. Baum. These stories are exciting to read, but they are not necessarily based on fact but rather are imaginative experiences created by the author.

The Air Force has investigated over 8,000 cases of reports of Unidentified Flying Objects during the past 16 years and has never found one bit of evidence that these Objects are any type of spacecraft from another planet. In almost every instance the report has turned out to be something that is familiar but seen perhaps under unusual circumstances, and therefore was not easily recognized. Sometimes experimental balloons high in the sky give a most unusual appearance. Airplanes flying overhead might look like an unusual object. Birds with shiny white chests that reflect the sunlight or the night lights from a city have resulted in reports of Unidentified Flying Objects. Besides man made objects, there are also phenomena such as meteors, comets, fireballs and the like which can really startle the imagination when seen on a dark night. Airplane pilots have been known to report Unidentified Flying Objects which turned out to be no more than large fireballs hurtling through the sky. Atmospheric conditions may account for an object being distorted and appearing as something else. There are any number of situations which might arise where you might peer at the sky and see something you are certain is unusual and unearthly. But when all the facts are known, it may be a common object you have seen many times before but simply could not recognize.
